SECTION – Generality

1.1 **Presentation**

This manual gives information, instructions and everything else you will need to understand, correctly operate and perform routine maintenance on trailer mounted spreaders mod. «MAXI», hereinafter also referred to as the machine, and of all the accessories produced by AGREX Spa of Villafranca Padovana (Padua) **Italy**, hereinafter also referred to as the Manufacturer.

You will not find a complete description of the various parts, or a detailed explanation of how they work herein. Nonetheless, you will find all the information you will usually need to operate the machine safely and to look after it properly.

Compliance with the instructions herein, together with careful, meticulous maintenance, is the only way to assure proper operation, lasting service and economic running of the machine.

Failure to comply with the provisions herein, negligent operation, incorrect use of the machine or performance of unauthorized changes may lead to the Manufacturer declaring its warranty covering the machine

THE MANUFACTURER ALSO DECLINES ANY RESPONSIBILITY FOR DAMAGES AS A RESULT OF THE ABOVE-MENTIONED ACTIONS OR FOLLOWING FAILURE TO COMPLY WITH THE INSTRUC-TIONS HEREIN.

For any repairs or overhauls entailing operations of some complexity, you must contact an authorized Customer Support Centre with specialized personnel, or the actual Manufacturer, who will be glad, in any case, to assure prompt, accurate technical servicing and anything else required to restore the machine to full working order.

This manual is an integral part of the machine and must be kept with the machine at all times, even when it is moved or sold. It must be kept in a safe place where personnel in charge of work on the machine know where to find it. Said personnel must look after it and keep it intact for future reference for the entire duration of the machine's service life.

If it is damaged or misplaced, you must ask the Manufacturer for a copy without delay.

1.1.1 Who the manual is intended for

This manual is an essential tool for personnel who, in their various capacities, are somehow involved with the machine.

The various job profiles are given below:

USER: A user is the person, or body, or company who has purchased or hired the plant and who intends to use it for its intended purposes. They are responsible for the machine and for the training of anyone involved with it.

OPERATOR: skilled technical personnel sent by AGREX S.p.A. to install the machine and train operators. Technicians are able to perform operations of a complex nature on the plant, or any work in unusual situations.

1.2 Conditions of guarantee

• The seller guarantees that the parts of the product are new, designed and manufactured so as to meet the specific technical characteristics of the product itself.

- The guarantee period is 12 months (twelve months) if the purchaser is a judicial entity (so-called "B to B sale", i.e. "business to business") or 24 months (twenty-four months) if the purchaser is a consumer (so-called "B to C sale"). The guarantee takes effect starting from the date of delivery of the product and, more specifically, from the date of the signature of the test certificate, if the machine has been tested, or from the date of the shipping document, in all other cases. In "B to B" sales, the guarantee period may not in any case exceed 18 months from the date the machinery is shipped.
- At the moment of delivery, the purchaser is required to check that the machine is in good condition and complete with all its parts.
- If the product has damage or defects which occurred during the guarantee period, the purchaser is required to inform the seller, in writing, of the existence and the extent of said damage or defects no later than 5 (five) days form the moment they are discovered, in "B to B" sales.
- The guarantee provides exclusively the right to free replacement or repair of the defective parts, which will be considered as such after careful examination by the seller's technical department. Shipping costs shall be at the expense of the seller, who shall select the method of shipment based on his own unquestionable judgment.
- Replacement or repair of parts covered by the guarantee shall not in any case extend the terms thereof.
- Under no circumstances shall the purchaser be entitled to the repair of the machinery or of the single components if full payment of the agreed amount has not been made.

1.2.1 Voidance of the guarantee

- This guarantee shall automatically be voided if the product undergoes interventions, modifications, or is used by technicians or staff who are not authorized in writing by the seller.
- This guarantee does not cover the replacement of the parts that are subject to normal wear and spare parts. Any additional costs, such as travel expenses, shipping and/or labour costs, are not covered by said guarantee.
- The guarantee shall not in any circumstance include loss of profits or any direct or indirect consequence thereof.
- The guarantee is automatically voided (in addition to the provisions in the supply contract) if:
 - a) non-original spare parts are used;
 - b) the damage is attributable to an erroneous operation performed by the purchaser and/or his personnel:
 - c) the damage is caused by insufficient maintenance;
 - d) the user carries out repairs at his discretion without the consensus of the manufacturer;
 - e) the instructions included in this manual are not carried out;
 - f) exceptional event;

also

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD)

g) THE REMOVAL OF THE SAFETY DEVICES WITH WHICH THE MACHINE IS EQUIPPED WILL AUTOMATICALLY VOID THE GUARANTEE AND RELIEVE THE MANUFACTURER OR ANY LIABILITY.

• The retailer shall not be liable for damage due to negligence, carelessness, poor utilization and improper use of the machine and all of its parts that are subject to normal wear during operation, lack of skill and carelessness of the purchaser or his employees and/or of the final client/user and/or his employees, to unacceptable overloads, to inadequate means and/or operating materials, to defects of the foundations and structures of the building (if the machinery requires certain characteristics of the place in which the it is to be located and installed, to inadequate means and/or materials of operation and to any other activity which is extraneous or not compliant with normal use of the product or to its specific technical characteristics or damage caused by modifications and/or repairs, replacements of single components, maintenance carried out by personnel not authorized in writing by the seller or any circumstance independent of the seller, as well as negligence or lack of skill in assembly by the purchaser and/or the final client/user.

1.3 Customer service

PERFORMING REPAIRS, WORK OR CHANGES OF ANY KIND OTHER THAN THOSE INDICATED HEREIN IS STRICTLY PROHIBITED.

Requests for servicing must be forwarded straight to the Technical Servicing Centre authorized by **AGREX** which will send skilled personnel and provide any necessary information and explanationùs.

When applying, remember to quote:

- Machine type
- · Serial number and year of manufacture
- Type of problem encountered

Cod. MENMAX10CESVR08 Agg. 20110330

Trailer mounted spreaders

2 SECTION – General features

2.1 Machine markings

Each machine features an identification plate (Pic. 1), whose data are given below:

- (A) MANUFACTURER
- (B) ABSORBED POWER
- (C) MAXIMUM LOADING
- (D) WEIGHT WHEN EMPTY
- (E) LOAD ON HOOK
- (F) MAX ON AXLE
- (G) MODEL
- (H) SERIAL NUMBER
- (I) YEAR OF MANUFACTURE

Pic. 1

Removing, replacing or in any way altering the identification plates on the machine or any accessories it comes with is strictly prohibited.

The machine is supplied with:

- «Operation and maintenance manual»
- «Manufacturer's declaration of conformity»

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

2.1.1 Spreader description

The spreader consists of (Pic. 2):

- 1- Frame
- 2- Gear box
- 3- Hopper
- 4- Hydraulic control

The MAXI series spreaders have been conceived to spread different types of fertilizers, as well as seeds, salt and granulated materials in general.

It is strictly forbidden to spread iron pieces, stones, grivel, glass and similar materials as they may injure people and cause damages.

- The fertilizer spreader is equipped with a regulation system that allows carrying out a spreading that varies from 6 to 24 meters.
- The fertilizer distribution opening and closing system is complete with an adjustable gate also for the dosing of superconcentrated products and for seeds.
- **Highest safety standards:** all rotating and transmission parts are protected by guards and protection devices in compliance with CE provisions.

A single worker can do himself all the necessary operations by himself

Pic. 2

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

2.1.2 Scheduled use

The machine has been built in conformity with European Union standards given in directive 2006/42/EC as described in the manufacturer's declaration supplied with each machine.

Seeding and fertilizing of soils are its ideal use.

The following can be spread:

- solid mineral fertilisers in granular or powder form
- seeds
- salt and sand

The machine should be towed and driven by tractors or self-propelled machines with a power suitable to the spreader weight when it is completely full.

The machine must be operated only outdoors and when visibility is sufficient to see where the product is being spread.

The machine is designed for professional use and the operators in charge must be certified fit and be able to read and understand the contents of this manual.

Operators must also use the machine in compliance with the current regulations concerning safety, conditions for use and characteristics of the machine.

2.1.3 Non-scheduled use

NEVER spread materials not specified in this manual: this would affect the safety of the machine users and persons working nearby.

NEVER disable the machine safety devices or remove the danger notices.

NEVER allow the machine to be used by disabled persons or children.

DO NOT transport people or animals during work and when moving the machinery from one place to another.

Consequently, the manufacturer shall NOT BE held responsible for any damage to equipment or property or bodily injury as a result of its improper use or any use other than that for which the machine is intended.

10 di 74

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

2.2 Control devices

A. To start or to stop the exit of the product from the hopper you have to operate on the botton "open" and "close" in the tractor hydraulic circuit.

As for the regulation of the spreading the machine is equipped with the following control levers:

- B. Belt advance speed adjustment to feed the discs: it is positioned on the side of the machine.
- **C. Distribution adjustment of product to be spread:** it is positioned on the back side of the machine.
- **D. Spreading adjustment**: it is positioned under the hopper in the rear part of the fertilizer spreader.

Pic. 4

2.4 Standards applied

The machine has been designed and produced in conformity with the provisions of directive 2006/42/EC, namely all moving parts have been made harmless by using guards, barriers and safety systems.

EN 14017:2005 +A2:2009 Agricultural and forestry machinery – Solid fertilizer distributors – Safety (2005) EN ISO 4254-1:2009 Agricultural machinery -- Safety -- Part 1: General requirements

ISO 11684:1995 Tractors, machinery for agriculture and forestry, powered lawn and garden equipment - Safety signs and hazard pictorials - General principles. (1995)

Trailer mounted spreaders

SECTION – Safety and accident prevention

3.1 Safety

The user must instruct personnel as to risks deriving from accidents, devices installed for the purpose of operator safety, and general safety rules provided for by directives and legislation in the country where the machine is being used.

Operator safety is one of the primary concerns of any machine manufacturer. When producing a new machine, every effort is made to allow for all potential hazardous situations and, of course, to adopt appropriate safety devices.

Nonetheless, the level of accidents caused by careless and inexpert use of various machines is still very high.

Lack of attention, thoughtlessness and overconfidence often lead to accidents, as can fatigue and drowsiness.

Hence this manual must be read very carefully, concentrating in particular on the section on safety rules.

The Manufacturer declines all responsibility for failure to comply with safety and accidentprevention regulations provided for by legislation, and with the provisions herein

WATCH OUT FOR THIS SYMBOL IN THE MANUAL: IT INDICATES A HAZARDOUS SITUATION.

Depending on the danger involved, this symbol may have one of three meanings:

The "DANGER" label indicates the highest level of danger and is intended to warn you that if the operations described are not performed properly, they will result in serious injury, death or long-term health risks.

The "WARNING" label warns you that if the operations described are not performed properly, they may result in serious injury, death or long-term health risks.

The "CAUTION" label warns you that if the operations described are not performed properly, they may result in damage to the machine and/or injury.

Cod. MENMAX10CESVR08 Agg. 20110330

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

IN ACCORDANCE WITH OF THE DIRECTIVE 2006/42/CE NOTE THE FOLLOWING CONVENTIONS:

DANGER ZONE: means any zone within and/or around machinery in which a person is subject to a risk to his health or safety.

EXPOSED PERSON: means any person wholly or partially in a danger zone

OPERATOR: means the person or persons installing, operating, adjusting, maintaining, cleaning, repairing or moving machinery

3.1.1 General safety rules

Failure to comply with the provisions of "Section 3 - Safety and accident prevention" and any tampering with safety devices shall relieve the Manufacturer of any responsibility in case of accident, damage or malfunctioning of the machine.

GENERAL WARNINGS:

- The user undertakes to entrust the machine only to qualified and suitably trained personnel.
- The user is required to take all necessary measures to ensure that unauthorized personnel have not access to the machine.
- The user undertakes to suitably instruct his personnel on the application and observance of safety rules. For this reason, he undertakes to ensure that all persons receive directions for using the machine and safety rules appropriate to their tasks.
- The user must contact the Manufacturer to report any defects or malfunctions detected in safety systems, as well as any situation presumed to be dangerous.
- The user at all times, must use personal protective gear provided for by legislation, and follow the instructions herein.
- The user must comply with all safety symbols and warnings applied on the machine.
- The user must not take their own initiative to perform operations or work outside their area of competence.
- The user are required to report to their superior any problems or hazardous situation encountered to their superiors.
- The machine has been tested only with the equipment supplied only. Fitting parts of different makes or making changes may alter the machine's characteristics and hence compromise its safe operation. Consequently, the Manufacturer declines any responsibility for any damage that might derive from use of non-original parts.
- The machine must be used only for the purpose for which it has been designed alone.
- The machine must not be run with safety devices removed.

14 di 74

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

3.1.2 Safety signs

The machine has been produced adopting every possible safety standard to assure operator safety.

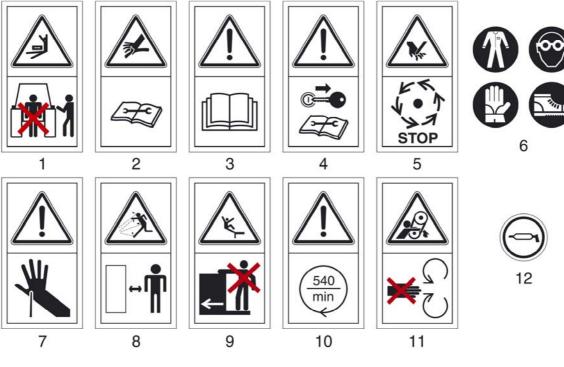

Nonetheless, the machine may present further residual hazards that cannot be eliminated altogether under certain conditions of use.

The safety symbols (pictograms) applied on various points of the plant are intended to draw the user's attention and warn him/her of danger: consequently, it is necessary to know the meaning of said symbols and to memory them. Any symbols that have been damaged, misplaced or belong to parts that have been changed must be replaced with other original symbols, requesting them to from the Manufacturer, and must be applied in exactly the same place.

KEEP ADHESIVES CLEAN, AND REPLACE THEM AS SOON AS THEY START PEELING OFF OR ARE DAMAGED.

Referring to pictures 5 and 6 read the following descriptions carefully, committing their meanings to memory.

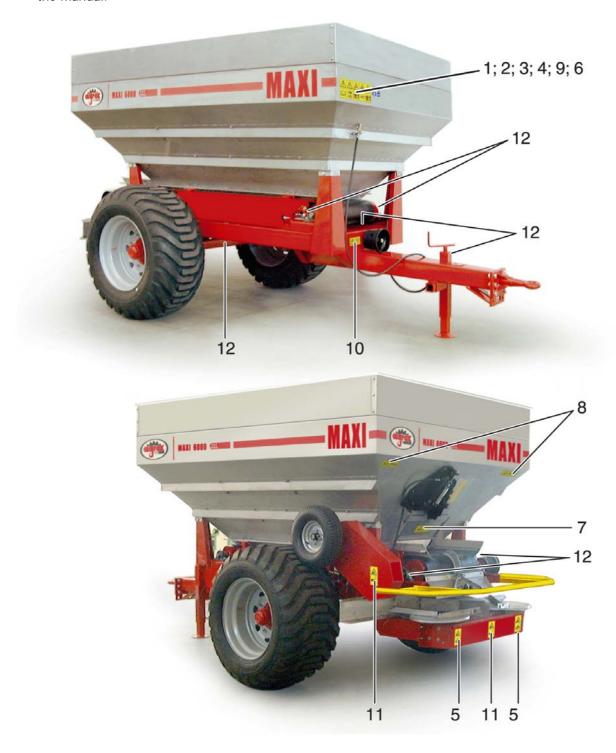

pic. 5

- 1. Warning! Risk of crushing; do not stand between the machine and the tractor.
- **2.** Warning! Risk of injury by pressurised liquids; read the Operation and Maintenance Manual before proceeding to operations on the machine.
- 3. Warning! Read the Operation and Maintenance Manual carefully.
- **4.** Warning! Before performing any maintenance operations, remove the tractor's ignition key and read the Operation and Maintenance Manual.
- **5.** Danger of pressing limbs: rotating parts.
- **6.** Always wear a work suit, safety gloves and safety shoes. Always wear safety goggles during machine loading and maintenance operations.
- 7. Warning! Distribution parts in movement: never enter the hopper while the machine is running.

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

- 8. Warning! Keep a safe distance from the machine; risk of sprayed product.
- **9.** Warning! Risk of falling, do not mount the machine for purposes of transportation.
- **10.** Warning! Never exceed a value of 540 rpm in the power takeoff.
- **11.** Danger of crushing limbs. Do not allow parts of the body between pulleys and belts, and do not go near moving parts.
- **12.** Greasing points. Grease mechanical parts according to procedures and scheduled intervals given in the manual.

Pic. 6

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

3.2 Safety devices

The machine features **GUARDS**: Stationary devices that prevent direct contact with moving parts or any other hazardous part of the machine. Said guards can be removed only with the aid of special tools. When the machine is operating, said devices must be fitted correctly.

CONSEQUENTLY, THE MANUFACTURER DECLINES ALL RESPONSIBILITY FOR ANY DAMAGE RESULTING FROM TAMPERING WITH GUARDS AND SAFETY DEVICES.

3.3 Noise hazard

Sound level (airborne noise) measured from one metre away with the machine running was as follows:

 $L_{DA} < 85 dB(A)$

3.4 Dust hazard

When spreading powder fertilisers, dust can form in the air especially when it is windy. You are therefore advised to wear a mask to protect the respiratory system.

Fertilisers in general can irritate the skin and eyes: contact the supplier for information on the personal protection measures to be adopted

3.5 Clothing

Wear suitable clothing. Avoid baggy, loose-fitting clothing: It might get caught up in moving parts. Long hair should be tied back. Operators should not carry scissors or sharp tools in their pockets.

During maintenance and repair work, workers are required to wear protective clothing, cut-proof gloves, and non-slip boots with reinforced.

3.6 Ecology and pollution

- Comply with laws in force in the country where the machine is being used regarding use and disposal of products employed in cleaning and servicing the machine, and comply with the instructions issued by the manufacturers of said products.
- Dispose of any special waste by handing waste materials in to suitably authorized firms, and demand a receipt attesting the disposal.
- Dispose of any packaging left over from the machine's transport in conformity with the regulations in force
- If the machine is to be dismantled, comply with the pollution-prevention regulations provided for by the country it is used in, exercising particular care when it comes to lubricants and electric components.
- Collect all spent products from the hydraulic circuits in appropriate containers. Deliver all spent oil recovered to authorised collection centres (spent oil consortiums).

3.7 Safe use

Safety standards: HOW TO AVOID ACCIDENTS

- To avoid accidents, pay close attention to the warning notices affixed on the machine and read this quide carefully.
- The use of the spreader is restricted to the fuctions, for which it has been designed and which are described in the present guide. The manufacturer will not be held responsible for any damages to things or injuries to people caused by a wrong use of the spreader.
- Before starting the spreader, make sure all protection devices and guards are mounted correctly.
- Make sure no bystanders (especially children) or animals are in the working area. This is extremely important when the spreader is being used near pubblic or easily accessible roads.
- Minors (under 18) are not allowed to operate the spreader
- The spreader can be towed with every kind of tractor of suitable power, whose couplings are compatible with those of the spreader and which is equipped with all P.T.O. and cardan shaft protection devices.
- Before connecting the P.T.O., make sure the revolution number of the tractor corresponds to that of the spreader. In any case, **never exceed 540 rpm**.
- It is strictly forbidden to spread iron pieces, stones, grivel, glass and similar materials as they may injure people and cause damages to things.
- Never load the hopper with wet products as they may obstruct the outlets.
- During work, wear close-fitting and laced-up garments, heavy safety shoes, and safety gloves and mask especially while spreading powdery fertilizers in windy weather
- It is forbidden to transport people when the spreader is working as well as during transfers.
- During transfers, make sure the P.T.O. is disengaged.
- When travelling on public roads, connect the spreader to the tractor as described on the present guide. A wrong connection may alter the vehicle stability. It is necessary to abide by the national traffic code.
- We remind you that a careful operator is the best insurance against accidents.
- The area the machine is used in should be considered a **«DANGER ZONE»**, especially for anybody not trained in its use.
- Be careful of people and animals in the machine operating range: this is important when working on land or roads open to the public
- When people are «exposed», i.e. are in the «DANGER ZONE», the operator must stop the machine instantly, and possibly have the person removed.
- Whilst the machine is operating, operators must be in a position where they have full control of the machine so that they can take immediate action at any time and in any event.
- Check periodically the machine as a whole, and its safety devices, at regular intervals to ensure they are intact

18 di 74

Cod. MENMAX10CESVR08 Agg. 20110330

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

- If safety guards are removed, make sure they are refitted properly before using the machine again.
- Maintenance or repair work must be performed by personnel qualified for the specific tasks
- At the end of maintenance and repair work, before re-using the machine the technical manager must ensure that the work has been completed and that the protections have been re-fitted.
- Transport of persons or animals during work and when moving the machine from one place to another is strictly forbidden.
- Regularly check the condition of the protections for the cardan shaft, bearing in mind that only cardan shafts with protections in good condition must be used.
- Never enter the hopper with the fertilizer spreading devices in motion.
- In order to avoid the formation of lumps of fertilizer and the clogging of the hopper, do not spread fertilizer on extremely humid or rainy days (if necessary, use the hopper-cover tarpaulin provided as an optional). Whenever clogging occurs, immediately switch off the machine to avoid damaging the fertilizer spreading devices. Remove lumps of fertilizer only after first switching off the tractor. Wear personal protective equipment (safety gloves, goggles) during machine cleaning operations
- Use cranes with adequate load capacity to load fertilizer sacks weighing more then 30 kg.

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

4 SECTION - Handling and installation

Normally the fertilizer spreader and its accessories are partially assembled in our factory. To complete the assembly it is necessary to follow the instruction indicated in this manual.

In some cases, depending on customer requirements, the machine is delivered fully assembled.

Upon receipt of the goods, carefully check to ensure that no damage has occurred during transport.

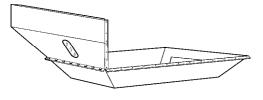

4.1.1 Assembly of hopper extensions

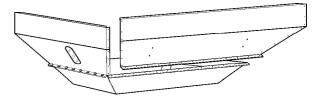

Before proceeding to hopper extension assembly/disassembly, uncouple the fertilizer spreader from the tractor and make sure that the fertilizer spreader is parked on solid, level ground.

Wear safety gloves and safety shoes for all the operations below.

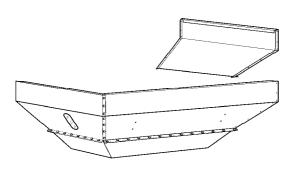

For the extensions assembly operate as follows:

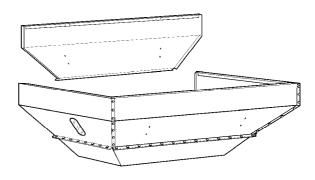

1. Fix the shorter extension on the base of the hopper. In this phase it is advisable not to tighten completely the fixing screws.

2. Fix one of the side extensions.

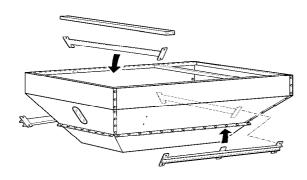

3. Fix the rear extension.

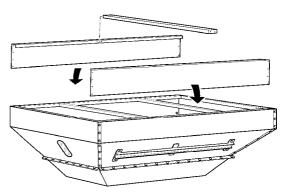

4. Complete the hopper with the other side extension.

Trailer mounted spreaders

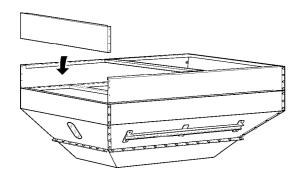

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

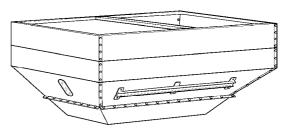

5. Assemble the tie rods of the hopper as indicated in the figure. Tight all the screws so that they are well fixed to the hopper.

6. Assemble the longer extensions to the extensions of the hopper and fix with the tie rod as indicated in the figure.

7. Assemble the shorter extensions to complete the rising of the hopper.

8. Tight all the screws in order to make the extensions integral with the hopper.

9. Check that all the screws are properly tightened.

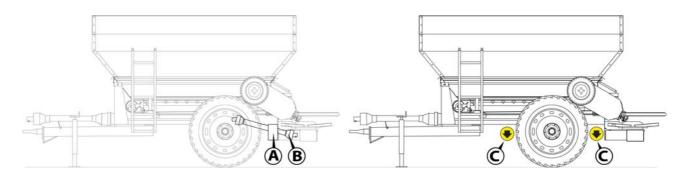

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

4.2 Handling

The machine must be handled by lift truck only, adequate for the weight to be lifted. (See 2.3 Technical data).

To lift the machine in the lifting point indicated (See Pic. 7).

- 1. Disassemble the protection case A and the cardan B.
- **2. C** = fertilizer spreader lifting point..

Pic. 7

If the machine is not immediately assembled and temporary storage is required, the machine must be kept in a dry covered place.

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

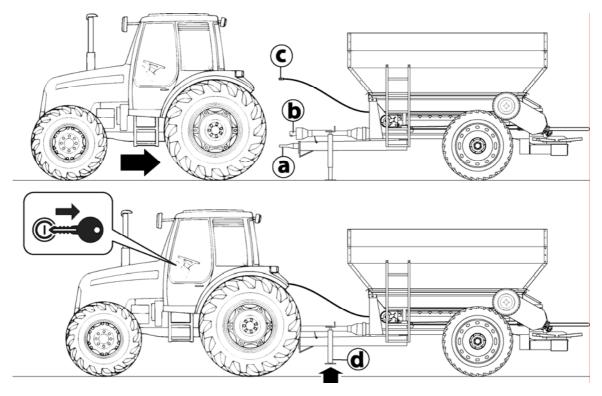

4.3 Hitching

The spreader can be hitched to any tractor of suitable power (see 2.3 technical data).

Before hitching the spreader to the tractor, apply the handbrake and make sure the P.T.O. is disengaged. Wear safety gloves.

For all the operations of tow fixing you must use protection gloves.

Pic. 8

- 1 Hook the drawbar (a) of the spreader to the tow of the tractor.
- **2 -** Place the drive-shaft **(b)**, making sure the backstop has been relased at the power takeoff and that the screw on the drive-shaft of the fertilizer spreader is locked. Read the handbook of the drive-shaft

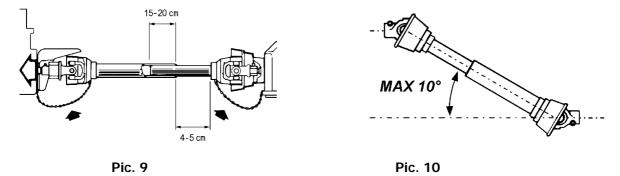

When the P.T.O. shaft is a maximun exstention, the two inner tubes have to overlap at least 15-20 cm.

When the P.T.O. shaft is completly closed, there must be a gap of at least 4-5 cm to avoid collisions with the outer side (Pic. 6).

The working angle of the P.T.O. has to be the smallest possible; preferably it should not exceed 10° (Pic. 7), so has to make the P.T.O. shaft and the machine last longer.

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

3- Connect the hoses **(c)** of the double-acting hydraulic couplings of the tractor (Pic. 8). In this way the shutters can be easily controlled from the driver's seat. Before connecting the pipes of the hydraulic system or before any maintenance, switch off the motor and take out the pressure acting on the appropriate gauge.

4-Lift the spread stand (d) acting on the winch.

4.4 Preliminary cleaning

Once all connections have been made, the whole machine must be cleaned of dirt that has built up during transit, storage and handling.

Use suitable non-corrosive degreasing products and dry all machine parts - exposed metal and paintwork alike - using soft, dry cloths.

4.5 General inspection

Before starting to use the machine, safety devices must be checked to ensure they are efficient and working perfectly.

To work in complete safety it is necessary to:

- · Tighten the bolts and all locking devices.
- Make sure all safety guards are properly installed.
- Do not leave tools or other objects not belonging to the machine inside the hopper or on the mechanical parts.

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

5 SECTION – Use

5.1 Prior to use

Before operating the machine, the operator must have read and understood all parts of this manual, especially those given in "Section 3" on Safety.

Check the machine's conditions carefully, especially parts most subject to wear and tear.

5.2 Starting up

The machine must be operated exclusively by skilled personnel, who have been properly trained in the use of the machine and in the main safety procedures. Before starting the machine, personnel are required to make themselves familiar with its controls.

5.3 Adjustments

In order to avoid accidents and dangerous situations every machine adjustments has to be done exclusively with the machine switched off and the ignition keys have to be disconnected. The adjustment should be done accordingly to this use and maintenance manual

The machine control is described in 2.2 Control Devices.

5.3.1 Adjustment of the speed of travel of the belt that feeds the discs

- 1- Disassemble the transmission wheel and the protection case (Pic. 11).
- 2- Release the chain tightener (a).
- 3- Increase or decrease the belt revolutions changing the pinion ratio:

Z: 12-60 slow movement Z: 22-54 fast movement

- 4- Tighten the chain using the chain tightener (a).
- 5- Assemble the protection case and the transmission wheel.

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

5.3.2 Adjustment of the quantity of product to be spread

- 1. The quantity of product to be spread is set by a gate opening (Pic. 12).
- 2. Set the opening index using the indicator located upon the gate on the back of the spreader.
- 3. Release the indicator lever, set it on the chosen position and fix the lever.

Pic. 12

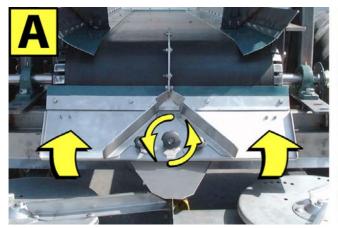

Trailer mounted spreaders

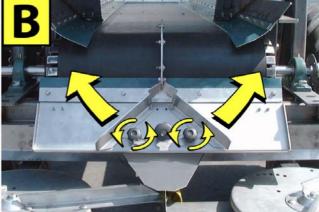

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

5.3.3 Spreading adjustment

DOUBLE ADJUSTMENT

The double adjustment of the fertilizer drop on the spreading disc allows to obtain the best spreading precision. According to the fertilizer granulometry and the requested spreading width, it is possible to obtain minimum coefficients of variation changing the adjustments as shown in the picture.

Pic. 13

- Rotating the central handwheel (Pic. 13/A) it is possible to determine the inclination of the chute and therefore the concentration of fertilizer in the centre or on the sides of the spreading path. Rising the chute the fertilizer is concentrated in the centre of the spreading path, lowering the chute the fertilizer is spread outward.
- The spreading width is adjusted by the flow directing vanes (Pic. 13/**B**). If the fertilizer drops on the centre of the disc the spreading width increases. If the fertilizer drops on the external part of the disc, the spreading width decreases.

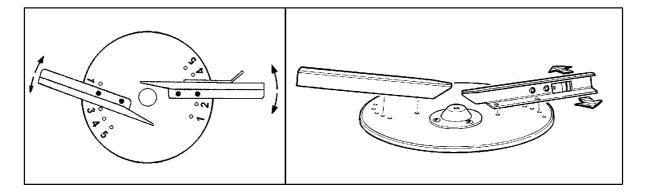

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

5.3.4 Adjusting the blades.

According to the different specific weights or the fertilizers, change the position of the spreading discs by fixing them in the stops 1-2-3-4-5.

One of the two blades is equiped with a graduate sliding plate. The small stop on the sliding plate determines the setting position. The setting of the plate must be carried out only on particular occasions, as it is adjusted by the manufacturer before the delivery.

Pic. 14

1. Unscrew the paddles screw.

2. Move the paddles to the new position.

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

5.3.5 Loading the machine's hopper

It is very important to check the stability of the fertilizer spreader after coupling to the tractor.

- Load the hopper by a mechanic loader or a crane only.
- Fill the hopper to the required level, making sure to distribute the fertilizer homogeneously inside to a flat level on top.
- Never load the hopper above its maximum acceptable loading level See Table 1 Technical Data.

Remember that the product to be spread must be clean, and that stones and scraps of metal can both create risk and irreparably damage the machine's moving parts.

5.3.6 Distribution

- Operate the tractor power take off.
- Operate the hydraulic system controls in order to open (close) the chute gate and put in operation (and stop) the transmission of the belt that feeds the spreading discs.

In this way the fertilizer drops on the spreading disc and, by the centrifugal force, is thrown outward by the vanes.

5.3.7 Operator's driving technique

The quality of spreading depends greatly on the operator's driving technique.

- During spreading, adopt evenly-distanced spreading passages in order to maintain constant distance from all previous spreading passages.
- Near the headlands and during the manoeuvres, stop the spreading and disengage the power take-off (PTO). In order to avoid spreading fertilizer outside the edges of the field, switch spreading back on again only after approaching the end of the field at a distance equal to the maximum rear spreading length (see the spreading tables).
- Grains of fertilizer are very lightweight and their trajectory of movement varies with the amount of wind.
 For this reason, stop spreading when wind speed is too high, otherwise the distribution of the fertilizer spread over the soil will be irregular.

6 SECTION – Maintenance

6.1 Routine maintenance

DO NOT CARRY OUT MAINTENANCE OR CLEANING OPERATIONS WHILE THE FERTILIZER-SPREADER IS COUPLED TO THE TRACTOR.

The various maintenance operations are described below.

The time intervals given refer to normal operating conditions; consequently, if the machine is subjected to particularly heavy duty, they must be reduced accordingly.

The purpose of these instructions is to assure efficiency, reduce wear and generally make the machine last longer: the user has everything to gain from keeping the machine in pristine condition.

6.1.1 Daily cleaning

After each day's work, the machine must be cleaned thoroughly, removing any waste and/or residues left behind after processing, or other damp or dusty materials.

6.1.2 General checks

- The vibrations produced during work and movement of the equipment from one place to another
 may in the long term cause loosening of the bolts. You are advised to check the nuts and bolts
 roughly every 50 working hours.
- Grease the PTO shaft cross every 10 hours.
- Check the tension of the belts that drive the spreading discs every 10 hours (See 6.1.3 Tightening of the transmission belts).

Pic. 15

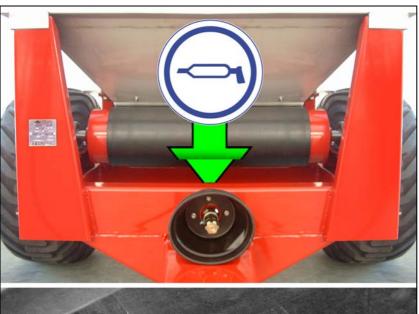

- Every 50 hours grease the transmission chain of the conveyor belt (Pic. 15):
- Disassemble the transmission wheel and the protection case.
- Grease the chains and the pinions with a grease special for transmissions.

Trailer mounted spreaders

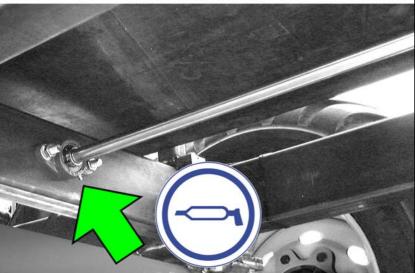

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

• Every 50 hours grease the transmission shaft supports of the conveyor belt using a grease gun (Pic. 16).

• Every 50 hours grease the PTO support (Pic. 17) and the spreading discs support shaft using a grease gun (Pic. 18).

Pic. 17

Pic. 16

Pic. 18

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

6.1.3 Tension drive belts

To tension drive belts, proceed as follows:

1. Loosen screws securing the lower guard.

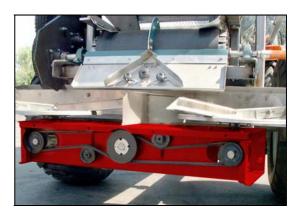

3. Loosen screw securing the belt-tensioner.

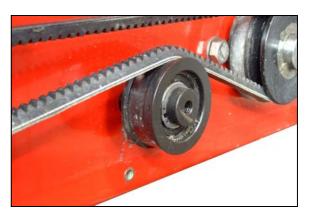

5. Tighten screw securing the belt-tensioner.

2. Remove lower guard.

4. Move belt-tensioner and increase drive belt tension.

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 - Fax +39 049 9075524

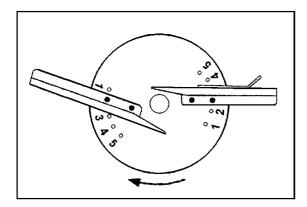

6.1.4 Spreading paddle assembly/disassembly

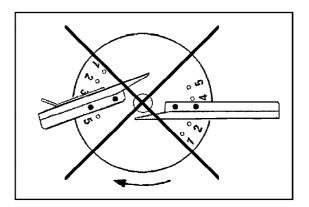

Before proceeding to the assembly/disassembly of the fertilizer spreader paddles, switch off the tractor's engine and set the parking brake.

- 1. Loosen the screws that fasten the spreader paddle to the fertilizer spreader disk.
- 2. Replace the old fertilizer spreader paddles with new ones and re-tighten the fixing screws.

Warning! The fertilizer spreader's paddles must be assembled in the correct disk rotation direction.

Correctly assembled paddles

Incorrectly assembled paddles

6.2 Extra maintenance

It is essential to conduct a general inspection of the machine's mechanical parts at regular intervals. In particular, it is necessary to check the usury of the vanes.

6.3 To keep in mothball

PARK THE FERTILIZER-SPREADER ON A COMPACT AND HORIZONTAL GROUND ONLY AND WITH THE HOPPER EMPTY.

If the machine is not employed for a long time it is necessary to check its mechanical and electrical parts, so that to avoid problems when bringing it into use again.

All parts subjected to wear must be carefully controlled. The worn out and damaged parts should be immediately replaced by original spare parts provided by the distributor or the producer.

Besides, check that the bolts of the machine are not shaked loose during the working.

Such instructions are meant to maintain the machine in good conditions, riducing its wear and tear and prolonging its life.

33 di 74

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

Uncouple the fertilizer spreader from the tractor by undoing the operations indicated in Section 4.2 (Coupling to the tractor).

After uncoupling the fertilizer-spreader from the tractor, hook the PTO shaft on the proper support in order to avoid damaging the PTO shaft protections.

In the same way, fasten the hydraulic distributor to its own support (see the respective figure).

Pic. 19

6.4 Re-start

Before putting the machine back into service, it is always a good idea to check its general conditions: its current state will depend on the conditions it was mothballed in.

6.5 Dismantling the machine

Should the decision be made to dismantle the machine, its components must be sorted into groups of like materials and disposed of individually in accordance with the local laws in force on disposal of special waste.

WHEN DISPOSING OF THE VARIOUS COMPONENTS, ONLY GO THROUGH A LEGALLY AUTHORIZED FIRM THAT WILL ISSUE A RECEIPT ATTESTING TO DISPOSAL

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

6.6. Maintenance of the wheels

6.6.1. Wheel nut tightening

Use a torque wrench to tighten the wheel bolts. The tightening torque must be 460 Nm.

After the first 50 km check the tightening of the wheel bolts.

6.6.2. Inflation pressure

At regular intervals check the wear conditions of the tyres and the inflation pressure according to the values of the following table:

Wheels	Pressure (bar)
385/65 R22.5 158L	8.5
500/50 R22.5 16PR TL	3
550/54 R22.5 16PR TL	2.8
560/45 R22.5 TL	4

Caution! Check the inflation pressure when the tyres are cold.

7 SECTION – Spare parts

7.1 Spare parts

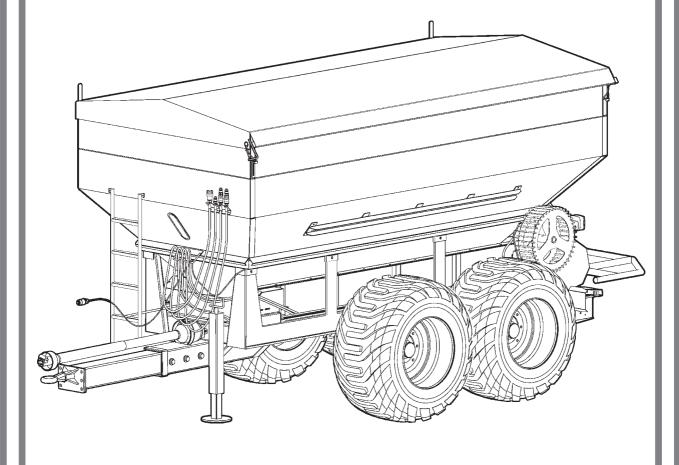

All the spare parts can be ordered from the manufacturer, quoting:

- machine model
- machine's serial number
- year of manufacture
- reference code of the part (to be found in the spare parts catalogue);
- means of transport: if no preference is specified, the manufacturer shall do its best to ensure you receive good service, though it declines all responsibility for any delays in shipment as a result of force majeure.

Lastly, remember you can always contact the manufacturer for your servicing.

Adjustment of the spreader with a new fertiliser type

Fertilizer that can be spreader

This centrifugal action fertilizer spreader can be used to spread fertilizer with the following characteristics (as defined in EN 13739-2 Standard):

Granular fertilizer Type A fertilizer:

> Specific weight (or density): greater than 0.9 kg/l Grain size: diameter between 2.5 and 4.2 mm

Granular fertilizer Type B fertilizer:

> Specific weight: less than 0.9 kg/l (0.7 - 0.9) Grain size: diameter between 1.8 and 4.2 mm

Type C fertilizer: Prilled-type granular mineral fertilizer

Specific weigh: greater than 0.9 kg/l

Grain size: diameter between 1.5 and 3.5 mm

Type D fertilizer: Prilled-type granular mineral fertilizer

> Specific weigh: lower than 0.9 kg/l (0.7 - 0.9) Grain size: diameter between 1.5 and 3.5 mm

Type E fertilizer: Compacted fertilizer

Specific weigh: greater than 0.7 kg/l

Grain size: diameter between 2.5 and 5.0 mm

The spreading tables provide the adjustments required for each type of fertilizer. In particular:

N.A.C. Fertiberia Type A fertilizer: Type B fertilizer: **UREA GRANULARE** Type C fertilizer: N.A.C Prilled Type D fertilizer: **UREA PRILLED** Type E fertilizer: KORN - KALI 40/6

New fertilizer

To spread a type of fertiliser different from the ones listed in the spreading charts, it is necessary to do some spreading tests in order to find the adjusting parameters of the new fertiliser type.

 Read the physical characteristics (density, grain side, etc.) provided by the producer of the fertilizer and then provide such type of fertilizer to be used with classification.
 For example:

If the technical characteristics provided by the fertilizer producer indicate that the fertilizer to be spread is of the prilled type with a specific weight of greater than 0.9 kg/l, this means that the respective fertilizer is a Type C fertilizer.

2. Set the machine by consulting the spreading tables provided for other types of fertilizer in the same Class:

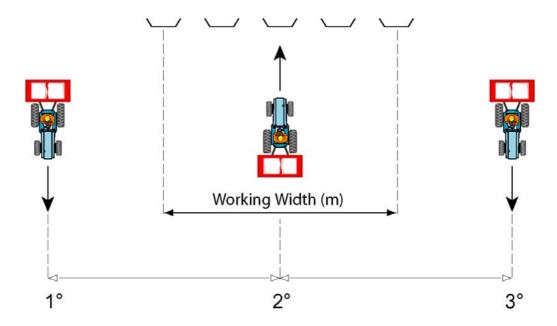

For example:

If the fertilizer to be spread is a Type A fertilizer, consult the spreading table for N.A.C. Fertiberia fertilizer

Make sure that all the settings are correct by first testing the setting of the flow rate and then conducting spreading tests.

Spreading test

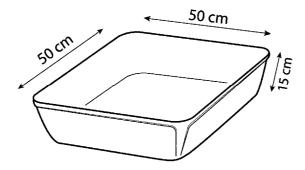

- 1. Place the five collecting containers along the working distance (see the picture).
- 2. Make 3 passes with the spreader, adjusting the machine as instructed in the manual. Bear in mind that the height indicated must be taken from the upper edge of the trays.
- 3. Weigh the fertiliser dropped in the collecting containers.
- 4. Draw up the spreading diagram.

Distribution test. Layout of collection trays and passes to be made.

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

Collection tray. Shape and size of collection tray to be used during distribution test.

Estimation of the results and adjustments

The graphs below show the typical patterns that can be achieved during spreading tests.

In the graphs featured, the amount of fertilizer contained in the collection trays is given as a percentage. To interpret the graphs correctly, you should bear in mind that the reference value, which is 100%, is given by the amount of fertilizer collected in the individual containers when the fertilizer spreader is adjusted to produce even, uniform distribution (Optimal spreading).

Reference value (100%) =
$$\frac{Concentration \ of \ fertilizer \ in \ g/ha \ to \ be \ distributed}{40000}$$

Note. The term 40,000 is given by the number of trays measuring 50x50 cm that fit on a hectare of land.

The *reference value* obtained above is a theoretical value. In reality however, the grains of fertilizer sometimes bounce and a part bounces out of the collection containers during spreading tests. For this reason, even under ideal spreading conditions, the quantity of fertilizer that can be collected in every single container will be lower than the theoretical reference value obtained above.

In order to plot the graph with greater precision, we recommend taking the *average collected value* that is obtained as the average value of the quantity of fertilizer collected in all the single containers as reference.

$$Average\ collected\ value = \frac{Quantity\ in\ Container\ 1 + Qty.\ in\ Cont.\ 2 + ... + Qty.\ in\ Container\ 5}{5}$$

Nota The average collected value calculation must be repeated for every fertilizer spreading test.

Cod. MENMAX10CESVR08 Agg. 20110330 Rev. 08

Cod. MENMAX10CESVR08
Agg. 20110330

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

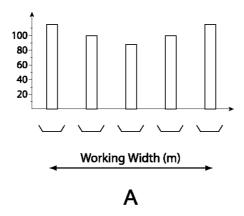

The percentage value of fertilizer contained in a collection tray is given by:

$$Percentage \ content = \frac{Amount \ of \ fertilizer \ in \ g}{Average \ collected \ value} \ \cdot \ 100$$

Depending on the resulting distribution graph, you may need to adjust the fertilizer spreader to achieve optimal distribution over the field (graph G).

Warning. When performing adjustments to optimize the spreading graphs, it is best to perform just one adjustment at a time so as to understand how the machine reacts to each single alteration and hence learn how to adjust the fertilizer spreader. (for instance, do not move the short blades and long blades at the same time as this may be confusing).

Type A diagram: Too much fertiliser on the sides.

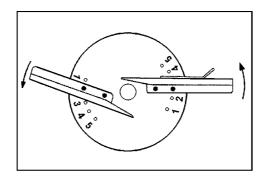

Adjustment:

Draw back the vanes on the discs to the highest positions (for example if the vane is set on position n. 2, move it to position n. 3, 4 or 5).

Move the longest vane first, then do a spreading test.

If there is still a lack of fertiliser in the centre, move the shortest vane as well.

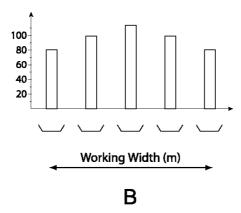

Example: how to move the vanes to the highest positions.

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

Type B diagram: Too much fertiliser on the centre.

Adjustment:

push the vanes on the discs to the lowest positions (for example if the vane is set on

position n. 4, move it to position n. 3, 2 or 1).

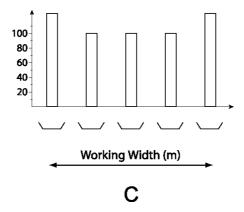

Move the longest vane first, then do a spreading test.

If there is still an excess of fertiliser on the centre, move the shortest vane as well.

Note on the adjustments

The adjustment of the short vanes position modifies the spreading diagram in the central part (spreading of fertiliser within the first 5-7 meters from the centre), while the adjustment of the long vanes position modifies the spreading diagram in the outer part (spreading of fertiliser beyond 6-10 meters).

Type C diagram: Too much fertilizer just at ends of working width.

Adjustment: Move ju

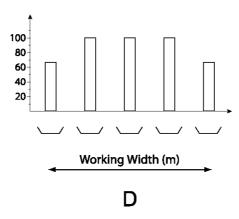

Move just the long blades to higher settings (for instance, if the long blade is on set-

ting 1, move it to 2-3).

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

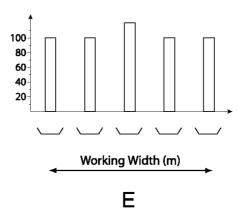

Type D diagram: Too little fertilizer just at ends of working width.

Adjustment: Move just the long blades to lower settings (for instance, if the long blade is on set-

ting 3, move it to 2-1).

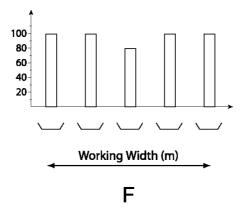

Type E diagram: Slightly too much fertilizer just at centre of the swath.

Adjustment: To eliminate excessive fertilizer at the centre of the swath, you have to close the short blade gap, i.e. move the position of the blade to a higher setting (for instance,

if the blade is on setting 3, move it to 4 - 5).

Type F diagram: Slightly too little fertilizer just at centre of the swath.

Adjustment: To eliminate the lack of fertilizer at the centre of the swath, you have to open the

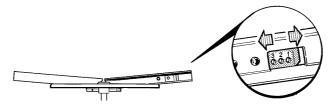

short blade gap, i.e. move the position of the blade to a lower setting (for instance,

if the blade is on setting 3, move it to 1 - 2).

Trailer mounted spreaders

Via Balla, 55/57 – 35010 Villafranca Padovana (PD) Tel. +39 049 9075684 – Fax +39 049 9075524

Adjustment of the short blades shutter

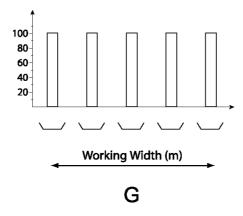

The short blades have a port that can be adjusted by sliding shutters. According to the shutter position it is possible to direct the fertiliser drop on the centre the spreading width.

In particular, if we shift the sliding shutter to another adjusting hole towards the port closing, a certain quantity of fertiliser is shifted from 2-4 meters from the centre of the spreading width to 5-7 meters out of the centre.

On the contrary, if we open the port, a certain quantity of fertiliser is shifted from the outer 5-7 meters of the spreading width to the centre.

Type G diagram: Optimum adjustment. So it is possible to spread the fertiliser on the field.
